Coronavirus vaccination - heading towards disaster with this 'warp speed' response?

Elizabeth Hart <elizmhart@gmail.com>

To: boris.johnson.mp@parliament.uk

For the attention of:

The Rt Hon Boris Johnson, MP,
The Prime Minister of the United Kingdom

Dear Prime Minister

Why has there been such a disproportionate and ill-targeted response to the coronavirus, grossly disrupting global economies and societies?

Much remains unknown about the SARS-CoV-2 virus, including the immune response. Why is there a mad rush for coronavirus vaccine products? This is a massive global experiment underway.

I fear we are heading towards disaster with this 'warp speed' vaccination plan.

What about the ethical considerations of implementing vaccine products which could seriously impact on people's natural defences against this virus and others?

Is it ethical to deny people their opportunity for a natural response to this virus, and to plan to make them dependent on what might be very questionable 'vaccine-induced immunity' of unknown duration and adverse effects? Is the aim to make people dependent on the vaccine industry?

This could be a 'crime against humanity' in the making.

Consider this admission by Heidi Larson, Director of The Vaccine Confidence Project, during the WHO Global Vaccine Safety Summit late last year, i.e.

"We've shifted the human population...to dependency on vaccine-induced immunity...We're in a very fragile state now. We have developed a world that is dependent on vaccinations".

This is a very alarming statement by Professor Larson, particularly with the prospect of other epidemics emerging in the future. We have to learn to deal with epidemics and illnesses as they emerge, it's not feasible to lockdown the world and plan to vaccinate the global population against every threat. Where has this bizarre and increasingly dystopian response come from?

Prime Minister, there has been a 'vaccine' mindset on this from the beginning, at the cost of considering effective treatments for the vulnerable and sick, and simple preventatives such as vitamin D.

Why has the response to this virus been so ill-targeted and disproportionate?

We need an investigation into conflicts of interest in this area of public health policy, including the influence of the World Health Organisation, the Bill & Melinda Gates Foundation, the Gavi Vaccine Alliance, and the Coalition for Epidemic Preparedness Innovations (CEPI).

The international community must be assured that independent and objective thinkers are carefully considering the way ahead.
