Please forward this email to the people addressed below.

For the attention of:

- Dr Anne Tonkin, Chair, Medical Board of Australia
- Ms Gill Callister PSM, Chair, Australian Health Practitioner Regulation Agency (AHPRA) Agency Management Committee
- Mr Martin Fletcher, CEO, AHPRA
- Dr Karen Price, President, Royal Australian College of General Practitioners (RACGP)
- Professor John Wilson AM, President, Royal Australasian College of Physicians (RACP)
- Dr Omar Khorshid, President, Australian Medical Association (AMA)

Dear Dr Tonkin, Ms Callister, Mr Fletcher, Dr Price, Professor Wilson and Dr Khorshid

Please see below my email to Professor Lesley Dwyer, CEO of the Central Adelaide Local Health Network, regarding the pressure on health staff to submit to covid-19 injections.

It's clear that health staff, and others, are not being properly informed about the SARS-CoV-2 virus and covid-19, and it seems most unlikely that people are freely giving their informed consent to covid-19 injections.

Meanwhile, the medical establishment is more concerned about [indemnity for GPs](#) pressing covid-19 injections on their patients, with [vaccine manufacturers](#) also being protected, and [industry](#) similarly seeking protection from liability when imposing covid-19 injections on their employees.

Dr Tonkin, Ms Callister, Mr Fletcher, Dr Price, Professor Wilson and Dr Khorshid, **this is looking like a disastrous shambles, you've got a real ethical problem on your hands with this ongoing situation of people being coerced to submit to covid-19 injections, and therefore not freely giving their informed consent before this medical intervention.**

Please see my email to Professor Dwyer below. It's on the record these matters have been brought to your attention.

Sincerely

Elizabeth Hart

Subject: Is it ethical to insist on covid-19 injections for health staff?

To: <rachael.kay@sa.gov.au>, <HealthCALHNOCEOCorrespondence@sa.gov.au>

Please forward this email to Professor Lesley Dwyer

For the attention of:

Professor Lesley Dwyer
Chief Executive Officer
Central Adelaide Local Health Network

Dear Professor Dwyer, thank you for your response to my concerns about CALHN staff being pressured to have covid-19 injections. (Copy of your response attached.)

You say SA Health and CALHN have a duty of care and a responsibility to minimise the risk of Vaccine Preventable Diseases (VPD) transmission in the workplace, and that transmission of VPD in health care settings has the potential to cause serious illness and avoidable death in Health Care Workers (HWCs), other employees, workers, patients, family members, visitors, and other users of SA Health services and others in the community.

However, it's been well-known from the outset that SARS-CoV-2 does not pose a serious threat for most people, i.e. most people are not at serious risk of covid-19. Many people might encounter SARS-CoV-2, including even older, more vulnerable people, and not be too adversely affected, or only moderately affected.

Why are people not at serious risk of covid-19, e.g. younger people who work in health services and associated areas, being pressed to have covid injections, even though these are unlikely to be of direct benefit to them? This is a serious ethical issue as the covid injections interfere with people's natural immune response, and provide an inferior level of immunity - with the apparent aim of hooking these people on covid injections for life.

The other major problem in the response to covid-19 is that treatments for the vulnerable and sick have been controversially suppressed, enabling emergency authorisations for covid 'vaccine' products. This is emerging as quite a scandal.

Professor Dwyer, you say "The COVID-19 Vaccination is recommended, however not considered mandatory" and "In accordance with the current Australian Immunisation Handbook, CALHN as the immunisation provider must obtain informed consent from the worker prior to vaccination. Documentation of the informed consent is maintained by CALHN".

I'm hearing anecdotal reports that health staff are under pressure to submit to these experimental medical products, how can they freely give their 'informed consent' in these circumstances? While I understand the rationale behind injecting health staff, i.e. to purportedly protect patients, if this robs these individuals of their opportunity for natural immunity, and exposes them to the risk of adverse events and unknown long-term harms from these products, **then clearly this warrants further urgent ethical evaluation.**

In my opinion, covid injections should not be foisted upon the entire community; in a world where the genuine objective was to aid the vulnerable and the sick, effective treatments should have been sought, but instead they're being suppressed. This is a shocking situation Professor Dwyer, with treatment being withheld from the vulnerable and sick.

There is much to be investigated and considered about the grossly disproportionate and ill-targeted global response to covid-19. In this regard, please see below my recent email to AHPRA, the Medical Board of Australia, the Royal Australian College of General Practitioners, the Royal Australasian College of Physicians and the Australian Medical Association, **which includes my email to Professor Andrew Pollard, Chief Investigator on the Oxford/AstraZeneca vaccine trials, and Chair of the UK Joint Committee on Vaccination and Immunisation, asking who initiated the plan to vaccinate the entire global population against SARS-CoV-2, when it was already known the virus wasn't a serious threat to most people?**

My email to Professor Pollard raises serious questions about the ethics evaluation process which approved covid-19 vaccine trials involving healthy people not at risk of covid-19.

Professor Dwyer, please consider my email to Professor Pollard, and think about the implications re the pressure on staff in health services to submit to covid injections, potentially for their lifetime, and forfeit their chance of natural immunity.

Please note my email to you will be forwarded to other parties, including those in the email contact list below.

Sincerely

For the attention of:

- Dr Anne Tonkin, Chair, Medical Board of Australia
- Ms Gill Callister PSM, Chair, Australian Health Practitioner Regulation Agency (AHPRA) Agency Management Committee
- Mr Martin Fletcher, CEO, AHPRA
- Dr Karen Price, President, Royal Australian College of General Practitioners (RACGP)
- Professor John Wilson AM, President, Royal Australasian College of Physicians (RACP)
- Dr Omar Khorshid, President, Australian Medical Association (AMA)

Dear Dr Tonkin, Ms Callister, Mr Fletcher, Dr Price, Professor Wilson and Dr Khorshid

Please see below my email to Professor Andrew Pollard, Chief Investigator on the Oxford/AstraZeneca vaccine trials, and Chair of the UK Joint Committee on Vaccination and Immunisation, asking **who initiated the plan to vaccinate the entire global population against SARS-CoV-2 when it was already known it wasn't a serious threat to most people?**

My email to Professor Pollard raises serious questions about the ethics evaluation process which approved the Oxford/AstraZeneca covid-19 vaccine trials involving healthy people not at risk of covid-19.

This also throws into question the ethics evaluation process for other covid-19 injections, e.g. Pfizer, Moderna, Johnson & Johnson, Sinopharm, Sputnik V, etc.

Dr Tonkin, Ms Callister, Mr Fletcher, Dr Price, Professor Wilson and Dr Khorshid, this is relevant to my previous emails to you on the subject of informed consent and ethics, i.e. **Coercive covid-19 injections in Australia**, 8 June 2021, and **Is it ethical for doctors to inject children with covid-19 injections?** 15 June 2021.

Again, see my email below to Professor Andrew Pollard, challenging the ethics evaluation process for the Oxford/AstraZeneca covid-19 vaccine trials.

It's on the record these matters have been brought to your attention.

Sincerely

Elizabeth Hart

Independent person investigating the over-use of vaccine products and conflicts of interest in vaccination policy.

McCullough, Nick Hudson, Emma McArthur

For the attention of:

Professor Andrew Pollard

Chief Investigator on the Oxford/AstraZeneca covid-19 vaccine trials

Head of the Oxford Vaccine Group

Chair of the UK Joint Committee on Vaccination and Immunisation (JCVI)

Professor Pollard, who initiated the plan to vaccinate the entire global population against SARS-CoV-2 when it was already known it wasn't a serious threat to most people?

What is being set in place now is a global plan to inject people of all ages and health status with covid injections throughout life. More covid injections are coming, e.g. courtesy of your group with the Oxford Covid-19 variant vaccine, i.e. the Beta variant, on top of the two doses of original covid-19 injections. Already 44.5 million people in the UK have had a first dose, with 32.7 million having a second dose. **But how many of these millions of people were actually at serious risk from covid-19? How many were already immune?**

This is a disaster. Billions of people around the world are being coerced into having covid-19 injections that may not be of benefit to them, and which may cause harm, including damaging natural immunity. We have no idea of the long-term consequences of covid-19 injections, this is a massive global experiment underway, without 'informed consent', which is in breach of medical ethics and international human rights conventions such as the Helsinki Declaration.

Additionally, billions of pounds have been diverted into this global covid-19 vaccine response, including widespread PCR testing, valuable resources which have been taken away from crucial areas of the health system.

Professor Pollard, it was acknowledged from the beginning that SARS-CoV-2 wasn't a serious risk for most people, e.g. the WHO stated **"Illness due to COVID-19 is generally mild, especially for children and young adults"**. (WHO Q&A on coronaviruses (COVID-19) - Should I worry about COVID-19. 9 March 2020.)

So how could an ethics committee approve the participation of people not at risk of covid-19 in covid-19 vaccine trials?

Due to ethics committees approving covid-19 vaccine trials including people not seriously at risk of the virus, billions of people around the world not at serious risk of covid-19 are being set up to have covid injections for life, with their own effective natural immune response being disrupted by these covid injections.

This is seriously unethical Professor Pollard! How on earth could an ethics committee approve vaccine trials that could lead to this outcome, did they not think this through?

Professor Pollard, I suggest the Oxford/AstraZeneca vaccine trials including people not at serious risk of covid-19, i.e. healthy people aged 18-55 years and children aged 6-17 years, **contravenes the Helsinki Declaration, e.g.**

"Medical research involving human subjects may only be conducted if the importance of the objective outweighs the risks and burdens to the research subjects...All medical research involving human subjects must be preceded by careful assessment of predictable risks and burdens to the individuals and groups involved in the research in comparison with foreseeable benefits to them and to other individuals or groups affected by the condition under investigation." (My emphasis.)

I'm staggered that an ethics committee could approve vaccine trials with participants who aren't at serious risk of the virus, i.e. not at serious risk of covid-19, particularly with the potential that these people could end up being caught into having covid injections for life.

Professor Pollard, **I requested transparency for the ethics evaluation carried out by the Berkshire Research Ethics Committee regarding the inclusion of children and others in the covid-19 vaccine trials**, commencing my email enquiries on 9 February 2021. (See email thread attached.) In my initial enquiry, I noted my questions had also been asked in my *BMJ* rapid response published on 5 February 2021, i.e. **Is it ethical to include children in the Oxford-AstraZeneca vaccine trials?**

After some delay, I finally received a response from the Health Research Authority (28 April 2021) saying:

- Your request has been refused, in part, under FOIA exemption *section 43 – trade secrets & prejudice to commercial interests*.
- Please note Section 43 is a qualified exemption and as such the public interest must be considered. Whilst the HRA promotes research transparency and recommends the results of all trials be made public, we also note that this study is in its very early stages. **Disclosing information at this stage could harm the commercial interests of the Sponsor and Third Parties and breach confidentiality agreements that prohibit the disclosure of such information.**
- Some of the documents you have requested contain information relating to a recently developed product and we are of the view that disclosure of the information, **which details inside information representing the unique knowledge and know-how of the Chief Investigator, sponsor and the third parties, would prejudice their commercial interests (including intellectual property), giving actual and potential competitors an unfair advantage.**
- When handling your request we have considered both the public interest and the interests of the sponsor and other third parties

(My emphasis.)

Professor Pollard, **it appears there is no transparency for the Berkshire Research Ethics Committee's deliberations on the Oxford/AstraZeneca vaccine trials, it remains unclear how it could be deemed ethical to include people not at serious risk of covid-19 in this medical experiment.**

The ethics process is more concerned about protecting the commercial interests of the Sponsor and Third Parties, and you as the Chief Investigator, rather than properly considering the best interests of people being recruited for the covid-19 vaccine trials, and whether it was appropriate to recruit healthy people aged 18-55 years and children aged 6-17 years.

It's really an astonishing situation Professor Pollard, and I don't think many people are awake to the significance yet...

This gets back to my previous questions to you Professor Pollard:

- **Who initiated the plan to vaccinate the entire global population against a virus which it was already known wasn't a serious threat to most people?**
- **How was this plan evaluated and by whom?**
- **Where is the public record?**

I request your urgent response on this matter. Also note my previous emails to you below, which remain unacknowledged and unanswered by you.

Sincerely

Elizabeth Hart

For the attention of:

Professor Andrew Pollard

Chief Investigator on the Oxford/AstraZeneca vaccine trials

Chair of the UK Joint Committee on Vaccination and Immunisation

Dear Professor Pollard

Why were children included in the Oxford/AstraZeneca covid-19 vaccine trials?

It was reported in May 2020 that "**most paediatric cases with laboratory-confirmed SARS-CoV-2 infection are mild; severe COVID-19 disease in children is rare**". *

It was known from the beginning that children weren't at serious risk with the SARS-CoV-2 virus, why were they included in covid-19 vaccine trials?

To vaccinate people at an early age with what potentially could be annual coronavirus vaccination throughout life, with unknown long-term cumulative consequences, raises important ethical questions, particularly when they are not at serious risk of disease.

Professor Pollard, I first asked you about this last year, in an email dated 20 June 2020, see email below. **But you did not respond.**

I also asked this question in my *BMJ* rapid response: **Is it ethical to include children in the Oxford-AstraZeneca vaccine trials?** 5 February 2021.

Professor Pollard, the Helsinki Declaration states: **"Medical research involving human subjects may only be conducted if the importance of the objective outweighs the risks and burdens to the research subjects."**

As children do not appear to be at serious risk with SARS-CoV-2, in my opinion the risks and burdens for them participating in covid-19 vaccine trials outweigh the importance of the objective of the medical research, particularly as the plan is for children in general society to be vaccinated, when this appears to not be appropriate.

Why were any age groups not at serious risk of the SARS-CoV-2 virus included in the covid-19 vaccine trials?

And, ***most importantly...*who initiated the plan to vaccinate the entire global population against a virus which it was already known wasn't a serious threat to most people?**

How was this plan evaluated and by whom?

Where is the public record?

I request your urgent response Professor Pollard, these are important matters of public interest. See my previous email to you below.

Sincerely

Elizabeth Hart

Subject: Questioning the ethics of children's involvement in Oxford's COVID-19 vaccine trials

To: <andrew.pollard@paediatrics.ox.ac.uk>

For the attention of:

Professor Andrew Pollard

Head of the Oxford Vaccine Group

Chair of the UK Joint Committee on Vaccination and Immunisation

Dear Professor Pollard, **is it ethical to include children in SARS-CoV-2/COVID 19 vaccine trials?**

The phase II part of the Oxford COVID-19 vaccine trial in human volunteers is planned to include children aged between 5-12 years: <http://www.ox.ac.uk/news/2020-05-22-oxford-covid-19-vaccine-begin-phase-iiiii-human-trials>

It's been reported that **"most paediatric cases with laboratory-confirmed SARS-CoV-2 infection are mild; severe COVID-19 disease in children is rare"**. (See comment published in *The Lancet Child & Adolescent Health: The immune system of children: the key to understanding SARS-CoV-2 susceptibility?* [https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642\(20\)30135-8/fulltext](https://www.thelancet.com/journals/lanchi/article/PIIS2352-4642(20)30135-8/fulltext))

How can it be ethical to include children in SARS-CoV-2/COVID 19 vaccine trials if most SARS-CoV-2 infections in children are mild, and severe COVID-19 disease in children is rare?

Professor Pollard, can you please advise what type of ethical committee process was undertaken in regards to Oxford's COVID-19 vaccine trial involving children aged between 5-12 years?

I would appreciate your response on this matter.

Sincerely

Elizabeth Hart
